

Amendments to the Specification

Please replace Paragraph [0025] on page 8 as follows:

[0025] The lamp depicted in Fig. 1 serves as a position light and has a ring-shaped light conductor element. The lamp is intended for use with a headlight 14 ~~that is not shown~~. The ring-shaped light conductor 1 encircles a lens of a light module in an interior space of the headlight 14. The ring-shaped light conductor element 1 can also encircle a bowl-shaped reflector 15. The light conductor element 1 has a single light in-coupling element 3 with a light source 4 associated therewith. A light diode serves as the light source 4. The light in-coupling element 3 and the light source 4 are arranged below the light module and a separate part of the light guide element 1. The light in-coupling element 3 is placed between two light out-coupling elements 2 that have a circular-shaped cross section; together they form an open ring and transition into one another because of the ring shaped structure.
